Sources and methods of data collection

Data on the first estimates of areas sown with important crops refer to the situation as on 1 June. These data are first information issued by the Croatian Bureau of Statistics on the situation of areas sown at the end of spring harvest. The following crops are included: wheat, maize, soya beans, rapeseed, sunflowers, sugar beets and potatoes.

Data on areas sown with important crops have been estimated by the Croatian Bureau of Statistics based on the following:

- results of the Annual survey on crop and animal production (PO-71 form)
- available administrative sources of the Ministry of Agriculture, Forestry and Fisheries, databases and registers from the Paying Agency for Agriculture, Fisheries and Rural Development Single Application and other relevant sources.
