CONSUMER PRICE INDICES, DECEMBER 2025 – Flash Estimate

The prices of goods and services for personal consumption, measured by the consumer price index, according to a flash estimate, increased by **3.3%** on average in December 2025 compared to December 2024 (at the annual level). Compared to November 2025 (at the monthly level), they decreased by **0.4%** on average.

According to the main index components (special aggregates), the estimated annual rate of change was 6.3% for Services, 3.9% for Energy, 3.1% for Food, beverages and tobacco, and 0.1% for Non-food industrial goods without energy.

At the monthly level, an increase in the rate of change was estimated for Services, of 0.3%, while a decrease in the rate was estimated for the components Non-food industrial goods without energy, of 0.8%, Energy and Food, beverages and tobacco, of 0.7% in each component.

The prices of goods and services for personal consumption, measured by the harmonised index of consumer prices, according to the flash estimate, increased by **3.8%** on average in December 2025 compared to December 2024 (at the annual level). Compared to November 2025 (at the monthly level), according to the flash estimate, they decreased by **0.3%** on average.

The flash estimate data of the euro area harmonised index of consumer prices for December 2025 are available at the [Eurostat website](#).

The final data for December 2025, according to the ECOICOP classification, will be released on 15 January 2026.

1 CONSUMER PRICE INDICES IN DECEMBER 2025 (TOTAL AND SPECIAL AGGREGATES), RATES OF CHANGE

ECOICOP	Weights	XII 2025 XII 2024	XII 2025 XI 2025
Consumer price index - total	1 000,00	3,3	-0,4
Food, beverages and tobacco	316,32	3,1	-0,7
Energy	158,20	3,9	-0,7
Non-food industrial goods without energy	265,34	0,1	-0,8
Services	260,14	6,3	0,3

G-1 ANNUAL CONSUMER PRICE INDICES, DECEMBER 2023 – DECEMBER 2025, RATES OF CHANGE¹⁾

1) Final data, excluding the data for December 2025 that relate to the flash estimate of the consumer price indices.

NOTES ON METHODOLOGY

The flash estimate of the national consumer price index and the harmonised index of consumer prices is based on the data on retail prices obtained from data sources by the end of the reference month to which the prices refer, which accounts for about 80% – 90% of received and processed data. The remaining received data are processed subsequently and included into the calculation of the index for the purpose of the final data release.

Release dates of the flash estimate and final data are available in the Calendar of Statistical Data Issues.

The annual consumer price index measures the changes in prices in the current month compared to the same month of the previous year, while the monthly index measures the changes in prices in the current month compared to the previous month.

Definitions

Consumer price index (CPI) is used as a general measure of inflation in the Republic of Croatia and reflects the changes in the prices of goods and services acquired, used or paid over time by a reference population (private households) for consumption purposes.

Harmonised index of consumer prices (HICP) is a set of European consumer price indices calculated according to a harmonised approach and a special set of definitions, which enables a comparable measure of inflation in the euro area, the European Union, the European Economic Area and in candidate countries.

Both indicators are calculated on the basis of the same representative basket of goods and services. The main difference is the coverage of the population: the HICP includes the total consumption of institutional households and non-residents in the economic territory, and this consumption is not included in the national consumer price index.
