

AGRICULTURAL QUARTERLY PRICE INDICES, FOURTH QUARTER OF 2025

Since 2024, agricultural quarterly price indices have been calculated on the basis of 2020 in accordance with Eurostat recommendations.

In the fourth quarter of 2025, the average producer prices of agricultural goods output increased by **41.3%** compared to 2020 and by **3.2%** compared to the same quarter of 2024.

The prices of crop products output were **35.1%** higher compared to 2020 and **0.7%** higher compared to the same quarter of 2024.

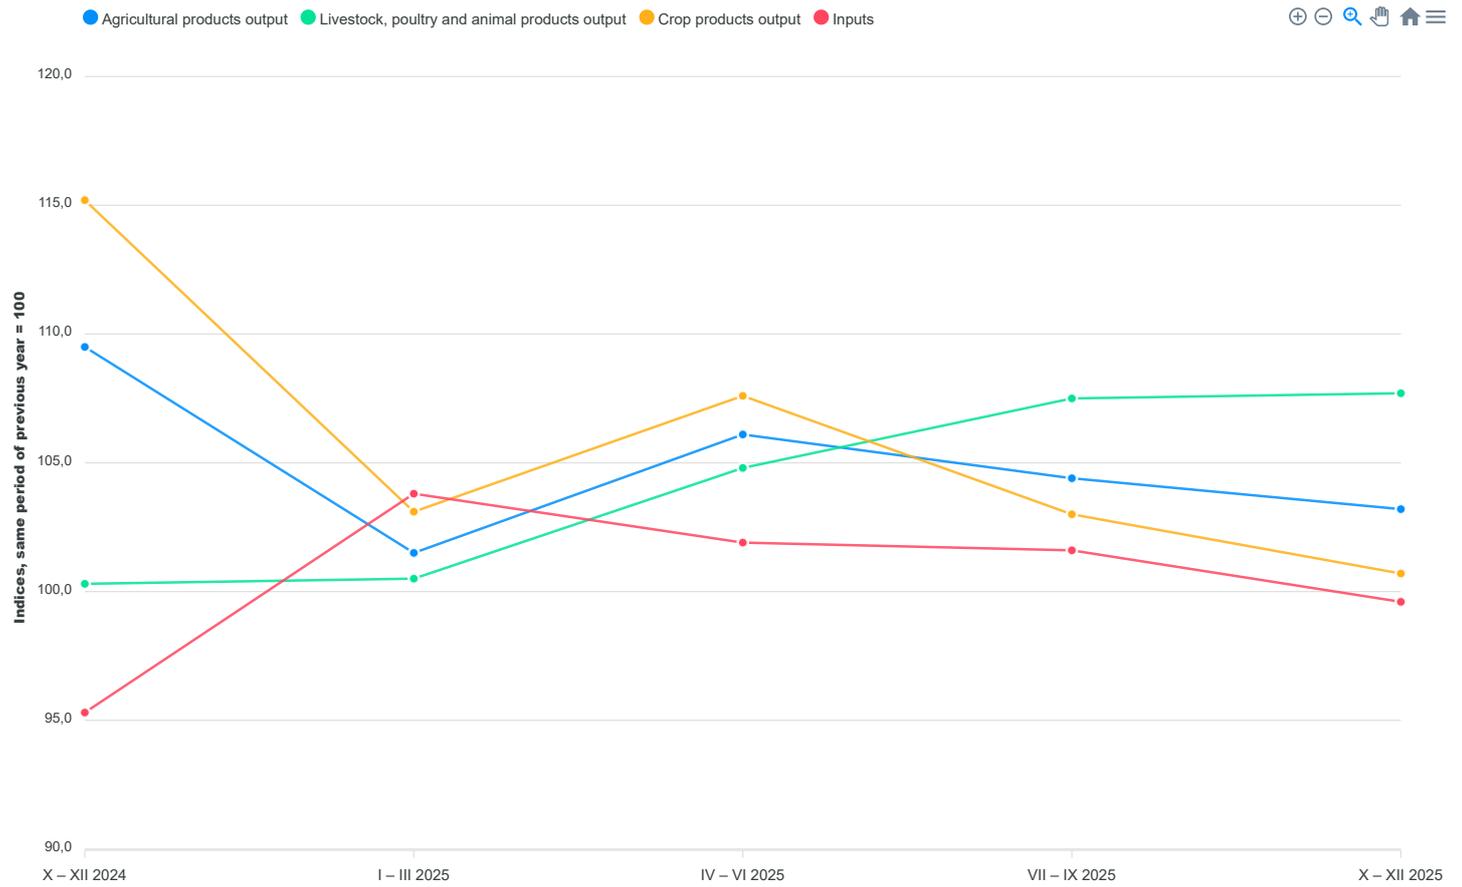

As regards the groups of products that have the largest share in crop production, an increase compared to the same period of the previous year was recorded in the prices of wine, of 12.4%, industrial plants, of 3.1%, and cereals, of 1.3%, whereas the prices of fruits decreased by 14.8%.

The prices of livestock, poultry, and animal products output increased by **53.4%** compared to 2020 and by **7.7%** compared to the same quarter of 2024.

As regards the groups of products that have the largest share in livestock production, an increase compared to the same quarter of 2024 was recorded in the prices of cattle, of 28.2%, milk, of 4.2%, and poultry, of 3.7%, whereas the prices of pigs decreased by 19.0%.

The prices of goods and services currently consumed in agriculture (input I) increased by **37.0%** in the fourth quarter of 2025 compared to 2020 and decreased by **0.4%** compared to the same quarter of 2024, which was mostly influenced by a decrease in the prices of energy, fertilisers and animal feedingstuffs.

G-1 AGRICULTURAL QUARTERLY PRICE INDICES, FOURTH QUARTER OF 2024 – FOURTH QUARTER OF 2025

1 PRICE INDICES OF AGRICULTURAL GOODS OUTPUT

Agricultural goods output	Indices	
	$\frac{X - XII\ 2025}{\emptyset\ 2020}$	$\frac{X - XII\ 2025}{X - XII\ 2024}$
Total	141,3	103,2
Agricultural goods output, excluding fruits and vegetables	142,6	105,0
Crop output	135,1	100,7
Crop output, excluding fruits and vegetables	135,3	103,1
Cereals	132,0	101,3
Industrial plants	129,2	103,1
Forage plants	108,7	106,0
Vegetables, flowers and plants	132,1	98,6
Fresh vegetables	151,0	93,3
Flowers and plants	122,2	102,3
Potatoes (including seeds)	148,5	95,4
Fruits	139,2	85,2
Wine	179,2	112,4
Olive oil	115,4	93,5
Livestock, poultry and animal products output	153,4	107,7
Livestock and poultry	150,7	108,5
Cattle	197,9	128,2
Pigs	100,3	81,0
Horses	108,4	105,9
Sheep and goats	218,3	126,2
Poultry	132,7	103,7
Other animals	133,6	112,6
Animal products output	161,2	105,5
Milk – total (cow's, sheep's and goat's)	153,5	104,2
Eggs, consumer	200,8	114,0
Other animal products output ¹⁾	98,4	75,6

1) The index refers to the prices of honey and raw skin (excluding lamb's).

2 PRICE INDICES OF GOODS AND SERVICES CURRENTLY CONSUMED IN AGRICULTURE (input I)

	Indices	
	$\frac{X - XII\ 2025}{\emptyset\ 2020}$	$\frac{X - XII\ 2025}{X - XII\ 2024}$
Input I, total	137,0	99,6
Seeds and planting stock	121,7	90,4
Energy and lubricants	159,1	98,2
Fertilisers	167,1	99,8
Plant protection products and pesticides	112,5	102,9
Veterinary expenses	144,5	111,4
Animal feedingstuffs	124,6	96,8
Maintenance of materials	146,4	107,7
Maintenance of buildings	150,6	106,3
Other services	115,9	103,5

NOTES ON METHODOLOGY

Sources and methods of data collection

The agricultural price indices for the Republic of Croatia have been calculated on the basis of the data on prices obtained through the quarterly surveys on the purchase and sale of agricultural products as well as through other surveys carried out by the Croatian Bureau of Statistics, from administrative data of the Ministry of Agriculture, Forestry and Fisheries and from other administrative sources.

The price indices in agriculture for the Republic of Croatia have been calculated for the first time on the 2005 basis within the national Phare 2005 Programme and the methodology used has been harmonised according to Eurostat recommendations.

Since 2024, the indices have been calculated on the 2020 basis.

The structure of weights is reviewed every five years according to the Eurostat methodology for agricultural price statistics, which means that the calculation of price indices is influenced by the weight structure from the base year. The Laspeyres formula is used to calculate the price indices.

The weight structure was calculated on the basis of the share of individual products in the purchase and sale of agricultural products as well as on the basis of the value of agricultural production and intermediate consumption from the agricultural economic accounts.

Coverage

The agricultural price indices are calculated at the level of the Republic of Croatia.

Definitions

Price index of agricultural goods output includes crop and animal output (livestock, poultry and animal products).

Input I includes goods and services currently consumed in agriculture.

Goods are all products except services.

Services include the maintenance of materials (machines and materials), agricultural buildings and other services.

The survey whose data are published in this First Release has been conducted with the financial assistance of the European Union. The contents of this document are the sole responsibility of the Croatian Bureau of Statistics and can under no circumstances be regarded as reflecting the position of the European Union.
