SECOND ESTIMATES FOR REAL INCOME IN AGRICULTURE, 2022

According to the second estimate, the value of real income in agriculture in 2022 will amount to 13 252 million kuna, which represents an increase of 4.8% in relation to the previous year. Concerning the value of agricultural production, it is expected that it will increase by 13.7% and amount to 23 519 million kuna.

The gross value added is estimated to reach 11 670 million kuna. As compared to the previous year, it is expected that it will increase by 6.3%.

The agricultural labour input increased by 0.5% compared to the previous year.

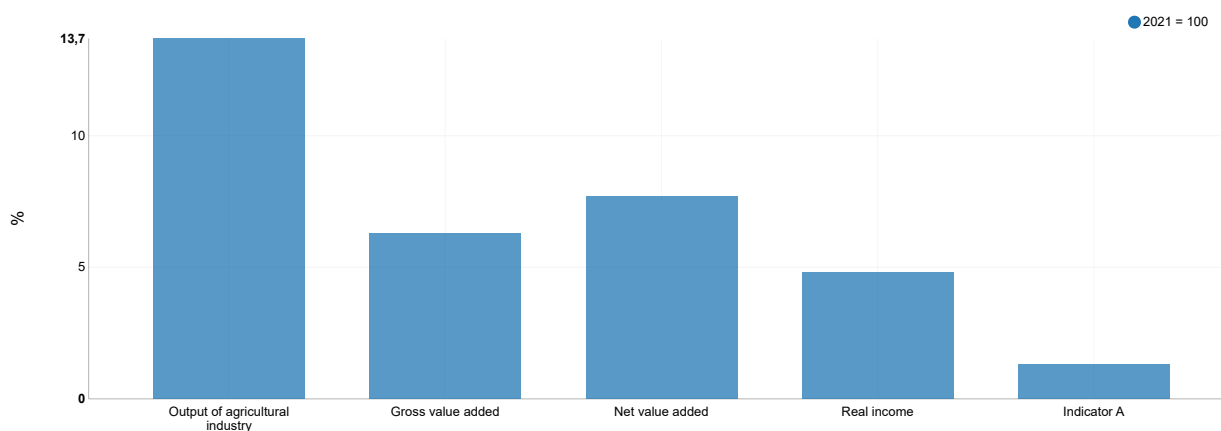

The real income index in agriculture per annual work unit is estimated to reach 73 048 kuna, which represents an increase of 1.3%.

1 VALUE OF OUTPUT OF AGRICULTURAL INDUSTRY, REAL INCOME AND LABOUR INPUT IN AGRICULTURE

	2021	2022 estimate	2022/2021 change rate
	Mln kuna		%
Agricultural production	20 688	23 519	13,7
Total intermediate consumption	9 709	11 849	22,0
Gross value added	10 979	11 670	6,3
Consumption of fixed capital	2 362	2 386	1,0
Net value added	8 618	9 283	7,7
Compensation of employees	1 201	1 337	11,3
Real income	12 640	13 252	4,8
Annual work unit, '000			
Agricultural labour input	171	172	100,5
Kuna		Index 2022/2021	
Index of real income in agriculture per annual work unit (indicator A) ¹⁾	72 082	73 048	101,3

1) The deflator used in the calculation of the real income in agriculture per annual work unit is the implicit price index of gross domestic product. It amounts to 105.501, according to the Eurostat calculations for the Republic of Croatia for 2022.

G-1 CHANGE RATE OF MAIN AGRICULTURE VALUE INDICATORS, 2022

NOTES ON METHODOLOGY

Sources and methods of data collection

The first estimate of real income in agriculture for the Republic of Croatia has been calculated on the basis of survey data of the Croatian Bureau of Statistics, administrative data from the Ministry of Agriculture and the Paying Agency for Agriculture, Fisheries and Rural Development.

The non-additivity of the sum of individual components of the indicators is the result of applying the method of calculation and rounding of the values on the detailed structure of categories and subcategories.

Legal framework

First estimates for real income in agriculture have been done on the basis of the Official Statistics Act (NN, No. 25/20) and harmonised with the Regulation (EC) No. 138/2004 of the European Parliament and of the Council of 5 December 2003 on the economic accounts for agriculture in the Community, and its amendments.

Coverage

The estimate of real income covers the whole agricultural production (by both private family farms and legal entities).

Definitions

Agricultural production equals the sum value of crop and animal outputs, agricultural services and inseparable non-agricultural secondary activities.

The accounting period is a calendar year.

Agricultural production is valued at base prices, which means that all subsidies on products and services are included and all taxes on products and services are excluded.

Intermediate consumption is the value of inputs used for agricultural production. It is valued at purchase prices.

Gross value added at base prices equals the agricultural production at base prices less intermediate consumption at purchase prices.

Net value added at base prices equals the gross value added at base prices less fixed capital consumption.

Real income equals net value added less taxes on production plus subsidies on production.

Indicator A - the index of real income in agriculture per annual work unit represents a quotient of real income value expressed in kuna and the agricultural labour input expressed in total annual work units, deflated by the implicit price index of gross domestic product.

Agricultural labour input includes the total number of working hours of all persons and employees who work as salaried or non-salaried labour force on typical agricultural jobs in agricultural industry. It is measured in annual work units. The annual work unit is a quotient of the total number of working hours done in the agricultural activity during a year and an average number of working hours, which amounts to 1 800 hours per annum for paid work.
