AGRICULTURAL QUARTERLY PRICE INDICES, 2026

Since 2024, agricultural quarterly price indices have been calculated on the basis of 2020 in accordance with Eurostat recommendations.

In the second quarter of 2026, the average producer prices of agricultural goods output increased by **55.9%** compared to 2020 and by **3.9%** compared to the same quarter of 2025.

The prices of crop products output were **60.0%** higher compared to 2020 and **7.0%** higher compared to the same quarter of 2025.

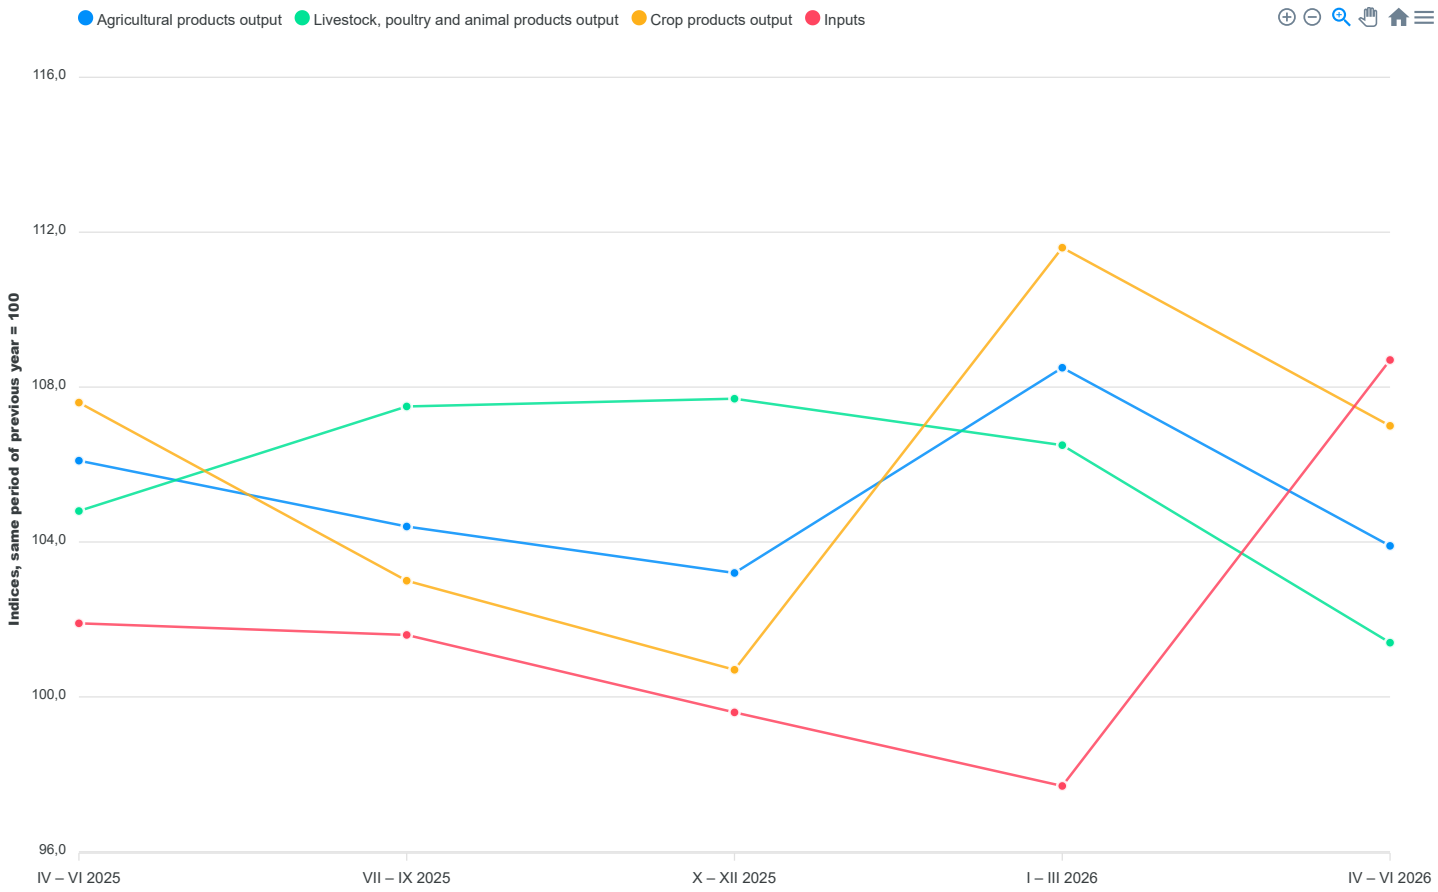

Compared to the same period of the previous year, prices increased in all groups of crop products that have the largest share in crop production. Prices increased in the groups of wine, by 14.0%, of forage plants, by 13.5%, of vegetables, flowers and plants, by 9.3%, and of cereals, by 0.1%.

The prices of livestock, poultry, and animal products output increased by **52.4%** compared to 2020 and by **1.4%** compared to the same quarter of 2025.

As regards the groups of products that have the largest share in livestock production, the prices of cattle increased by 12.1% and the prices of poultry by 0.8%, whereas the prices of pigs decreased by 19.7% and the prices of milk by 1.0%, as compared to the same quarter of 2025.

The prices of goods and services currently consumed in agriculture (input I) increased by **54.9%** in the second quarter of 2026 compared to 2020 and by **8.7%** compared to the same quarter of 2025, which was influenced by an increase in the prices of energy, fertilisers and animal feedingstuffs.

G-1 AGRICULTURAL QUARTERLY PRICE INDICES, SECOND QUARTER OF 2025 – SECOND QUARTER OF 2026

1 PRICE INDICES OF AGRICULTURAL GOODS OUTPUT

Agricultural goods output	Indices	
	IV – VI 2026 Ø 2020	IV – VI 2026 IV – VI 2025
Total	155,9	103,9
Agricultural goods output, excluding fruit and vegetables	154,3	103,1
Crop output	160,0	107,0
Crop output, excluding fruit and vegetables	157,6	106,2
Cereals	135,9	100,1
Industrial plants	130,9	99,9
Forage plants	154,0	113,5
Vegetables, flowers and plants	165,1	109,3
Fresh vegetables	171,4	107,7
Flowers and plants	156,4	111,8
Potatoes (including seeds)	159,5	100,7
Fruit	176,3	103,9
Wine	188,0	114,0
Olive oil	157,4	86,5
Livestock, poultry and animal products output	152,4	101,4
Livestock and poultry	152,4	101,5
Cattle	198,4	112,1
Pigs	97,1	80,3
Horses	114,3	97,6
Sheep and goats	224,2	113,1
Poultry	131,5	100,8
Other animals	133,8	112,7
Animal products output	152,4	100,9
Milk – total (cow's, sheep's and goat's)	143,1	99,0
Eggs, consumer	201,4	107,7
Other animal products output[1)]	106,6	98,5

1) The index refers to the prices of honey and raw skin (excluding lamb's).

2 PRICE INDICES OF GOODS AND SERVICES CURRENTLY CONSUMED IN AGRICULTURE (input I)

	Indices	
	IV – VI 2026 Ø 2020	IV – VI 2026 IV – VI 2025
Input I, total	154,9	108,7
Seeds and planting stock	141,5	93,7
Energy and lubricants	241,9	166,6
Fertilisers	205,9	114,7
Plant protection products and pesticides	116,5	103,5
Veterinary expenses	133,0	96,6
Animal feedingstuffs	137,8	102,7
Maintenance of equipment	99,6	70,0
Maintenance of buildings	98,6	67,5
Other services	105,9	91,7

NOTES ON METHODOLOGY

Sources and methods of data collection

The agricultural price indices for the Republic of Croatia have been calculated on the basis of the data on prices obtained through the quarterly surveys on the purchase and sale of agricultural products as well as through other surveys carried out by the Croatian Bureau of Statistics, from administrative data of the Ministry of Agriculture, Forestry and Fisheries and from other administrative sources.

The price indices in agriculture in the Republic of Croatia have been calculated on the 2005 basis within the national Phare 2005 Programme for the first time and the methodology used has been harmonised according to Eurostat recommendations.

Since 2024, the indices have been calculated on the 2020 basis.

The structure of weights is reviewed every five years according to the Eurostat methodology for agricultural price statistics, which means that the calculation of price indices is influenced by the weight structure from the base year. The Laspeyres formula is used to calculate the price indices.

The weight structure was calculated on the basis of the share of individual products in the purchase and sale of agricultural products as well as on the basis of the value of agricultural production and intermediate consumption from the agricultural economic accounts.

Coverage

The agricultural price indices are calculated at the level of the Republic of Croatia.

Definitions

Price index of agricultural goods output includes crop and animal output (livestock, poultry and animal products).

Input I includes goods and services currently consumed in agriculture.

Goods are all products except services.

Services include the maintenance of equipment (machines and materials), agricultural buildings and other services.

The survey whose data are published in this First Release has been conducted with the financial assistance of the European Union. The contents of this document are the sole responsibility of the Croatian Bureau of Statistics and can under no circumstances be regarded as reflecting the position of the European Union.
