

KRATKOROČNI POKAZATELJI ENERGETSKE STATISTIKE U LISTOPADU 2021. PRVI REZULTATI

SHORT-TERM INDICATORS OF ENERGY STATISTICS, OCTOBER 2021 FIRST RESULTS

U listopadu 2021. električna energija raspoloživa za potrošnju iznosila je 1 492 GWh. Ta količina sadržava i gubitke u električnoj mreži.

In October 2021, electricity available for the inland market amounted to 1 492 GWh, including losses in the electricity network.

Kod drugih energenata količina raspoloživa za potrošnju sadržava i količine energenata koje mogu završiti na skladištu kod finalnih potrošača ili u maloprodaji.

As for other energy products, the quantity available for the inland market also contains the quantities of energy products that may end up in warehouses, either in those of final consumers or in retail trade.

G-1. ELEKTRIČNA ENERGIJA, RASPOLOŽIVA ZA TUZEMNU POTROŠNJU, LISTOPAD 2019. – LISTOPAD 2021.
ELECTRICITY AVAILABLE FOR INLAND MARKET, OCTOBER 2019 – OCTOBER 2021

Raspoloživo za tuzemnu potrošnju	-	-	3	6	-	-	1	1	<i>Available for inland market</i>

METODOLOŠKA OBJAŠNJENJA

Ovo Priopćenje sastavlja se na temelju više statističkih istraživanja, i to: Mjesečnog istraživanja o industrijskoj proizvodnji i zaposlenim osobama (IND-1/KPS/M), Mjesečnog istraživanja o naftnim rafinerijama (ERG-1/N), Mjesečnog istraživanja o uvozu, izvozu i zalihama nafte i naftnih derivata (ERG-2/N), Mjesečnog istraživanja o uvozu, izvozu, zalihama i isporukama prirodnog plina (ERG-1/P), Mjesečnog istraživanja o uvozu, izvozu, zalihama, isporukama i potrošnji ugljena i koksa (ERG-1/U), Mjesečnog istraživanja o elektranama (ERG-1/EL) te podataka dobivenih iz Jedinственe carinske deklaracije o izvozu i uvozu robe.

Mjesečni podaci u ovom Priopćenju služe za praćenje kretanja energenata prema navedenim obilježjima, a zbrojeni za 12 mjeseci ne predstavljaju godišnje bilančne podatke jer zbog brzine davanja podataka u mjesečnoj dinamici ili storniranja nekih isporuka može doći do manjih odstupanja u mjesečnim podacima. Zbog toga preporučujemo sljedeće izvore za godišnje podatke: godišnje Statističko izvješće "Energetska statistika", koje objavljuje Državni zavod za statistiku, i godišnji energetska pregled "Energija u Hrvatskoj", u izdanju Ministarstva gospodarstva i održivog razvoja.

Bruto proizvodnja električne energije jest proizvedena električna energija na generatoru hidroelektrana, termoelektrana i CHP na fosilna goriva, termoelektrana i CHP na obnovljiva goriva, vjetroelektrana i sunčanih elektrana.

Neto proizvodnja električne energije jest električna energija isporučena elektromreži iz elektrane. To je razlika između proizvedene električne energije na generatoru i vlastite potrošnje.

Geotermalne elektrane proizvode energiju dostupnu kao toplinu koja isijava iz unutrašnjosti Zemljine kore, uglavnom u obliku vruće vode ili pare; isključujući okolnu toplinu koju sakupljaju toplinske crpke iz tla. Proizvodnja geotermalne energije jest razlika između entalpije tekućine dobivene iz bušotine i krajnje otpadne tekućine.

Raspoloživa energija za potrošnju jest količina energenata raspoloživa za finalnu tuzemnu potrošnju u koju su uključeni gubici i zalihe kod finalnih potrošača i u maloprodaji.

Sirova nafta jest mineralno ulje prirodnog podrijetla koje obuhvaća mješavinu ugljikovodika i dodatnih nečistoća, npr. sumpora. Nalazi se u tekućem agregatnom stanju pod normalnom temperaturom i tlakom, a njezina fizikalna svojstva (gustoća, viskoznost itd.) jako variraju. U sirovu naftu uključeni su i kondenzati koji se dobivaju iz vezane ili nevezane proizvodnje plina pomiješanoga s komercijalnom sirovom naftom.

Prirodni plin sastoji se od plinova, nastaje prirodno u podzemnim nalazištima bilo u tekućem bilo u plinovitom stanju. Uglavnom se sastoji od metana. Uključuje i "nevezani" plin, koji potječe iz nalazišta što daju ugljikovodike samo u plinovitom stanju, i "vezani" plin, proizveden zajedno sa sirovom naftom, te metan iskopan iz rudnika ugljena (plin iz rudnika). Prirodni plin uključuje i industrijski proizveden plin (proizveden od gradskoga ili industrijskog otpada ili kanalizacije). Ispuhane ili spaljene količine prirodnog plina ne računaju se.

Naftni derivati jesu svi proizvodi koji su proizvedeni u naftnim rafinerijama, a to su: rafinerijski plin, ukapljeni plin, motorni benzini, petrolej, mlazno gorivo, dizelsko gorivo, ekstralako loživo ulje, loživo ulje, primarni benzin, *white spirit*, maziva ulja, bitumen, parafin, naftni koks i ostali proizvodi rafinerija.

Pod **ostalim naftnim derivatima** iskazani su i ukapljeni plinovi u degazolnazi.

NOTES ON METHODOLOGY

This First Release is prepared on the basis of several statistical surveys, as follows: the Monthly Survey on Industrial Production and Persons Employed (IND-1/KPS/M form), the Monthly Survey on Oil Refineries (ERG-1/N form), the Monthly Survey on Import, Export and Stocks of Petroleum and Petroleum Products (ERG-2/N form), the Monthly Survey on Import, Export, Stocks and Deliveries of Natural Gas (ERG-1/P form), the Monthly Survey on Import, Export, Stocks, Deliveries and Consumption of Coal and Coke (ERG-1/U form) and the Monthly Survey on Electricity Power Plants (ERG-1/EL form) as well as on the data obtained from the Single Administrative Document on export and import of goods.

The monthly data in this First Release are used for monitoring the changes in energy products according to the mentioned characteristics. Their sum for 12 months does not represent the annual balance data, due to the fast output of monthly data or to the fact that some deliveries are cancelled, which may lead to slight deviations from the monthly data. For that reason, the following sources of annual data are recommended: the annual Statistical Report entitled Energy Statistics published by the Croatian Bureau of Statistics and the annual energy review entitled Energy in Croatia published by the Ministry of Economy and Sustainable Development.

Gross electricity production is the sum of the total electrical energy production by all the generating sets concerned (hydro power plants, thermal power plants and CHP on fossil fuels, thermal power plants and CHP on renewable fuels, wind power plants and solar power plants).

Net electricity production is the electrical energy supplied from a power station to a power-supply grid and it represents the difference between the electrical energy produced in a generator and own supply.

Geothermal power plants produce energy available as heat emitted from within the Earth's crust, usually in the form of hot water or steam; excluding the surrounding heat collected by the heat pumps from the ground. This energy production is the difference between the enthalpy of the fluid produced in the production borehole and that of the fluid eventually disposed of.

Energy available for consumption is the quantity of energy products available for final consumption on the inland market, including losses and stocks at final consumers and in retail trade.

Crude oil is a mineral oil of natural origin that includes a mixture of hydrocarbons and associated impurities, such as sulphur. It exists in the liquid phase under normal surface temperature and pressure and its physical characteristics (density, viscosity, etc.) are highly variable. This category includes field or lease condensates recovered from associated and non-associated gases where it is commingled with the commercial crude oil stream.

Natural gas is comprised of gases, occurring naturally in underground deposits, whether liquefied or gaseous, consisting mainly of methane. It includes both "non-associated" gas originating from fields producing hydrocarbons only in gaseous form, and "associated" gas produced in association with crude oil as well as methane recovered from coal mines (colliery gas). Manufactured gas (produced from municipal or industrial waste or sewage) is also included, while vented or flared quantities of natural gas are excluded.

Petroleum products are all products produced in petroleum refineries: refinery gas, liquefied petroleum gas, motor gasoline, kerosene, jet fuel, diesel oil, light fuel oil, fuel oil, naphtha, white spirit, lubricating oils, bitumen, paraffin waxes, petroleum coke and other refinery products.

Other petroleum products encompass liquefied petroleum gas in NGL plants.

Pod **uvozom** se podrazumijevaju količine energenata koje su prešle državnu granicu Republike Hrvatske bez obzira na to jesu li ili nisu ocarinjene. Količine nafte, naftnih proizvoda i tekućeg plina pod ugovorima o proizvodnji koje se ostvaruju u inozemstvu također treba iskazati u ovoj tablici kao uvoz. Energenti u tranzitu kroz Republiku Hrvatsku ne iskazuju se u ovom obrascu ni kao uvoz ni kao izvoz.

Pod **izvozom** se podrazumijevaju količine koje su prešle državnu granicu Republike Hrvatske bez obzira na to jesu li ili nisu ocarinjene i jesu li ili nisu vlasništvo hrvatskog rezidenta.

Za uvoz i izvoz električne energije primjenjuje se Eurostatova definicija koja uključuje i tranzit: količine električne energije smatraju se uvezenima ili izvezenima kada prijeđu političke granice zemlje bez obzira na to jesu li ili nisu ocarinjene. Ako električna energija prolazi kroz zemlju, količina te energije prijavljuje se i kao uvoz i kao izvoz.

Pod **promjenom zaliha** podrazumijevaju se promjene stanja zaliha na početku i kraju mjeseca u poduzećima koja se bave proizvodnjom, transformacijom, uvozom i izvozom energije. Razlika se dobije tako što se od stanja zaliha na kraju posljednjeg dana u mjesecu oduzme stanje zaliha na početku prvoga radnog dana u istome mjesecu.

Import includes the quantities of energy products that crossed the state border of the Republic of Croatia, regardless of whether or not they were cleared through the customs. The quantities of petroleum and petroleum products and liquid gas that are under contracts on production realised abroad are also to be presented in this table as import. Energy products in transit through the Republic of Croatia are not presented in this survey form either as import or as export.

Export includes the quantities that crossed the state border of the Republic of Croatia, regardless of whether or not they were cleared through the customs and whether or not they are owned by a Croatian resident.

For import and export of electricity, a Eurostat definition is used which includes transit: amounts of electricity are considered imported or exported when they have crossed the political boundaries of a country, regardless of whether customs clearance has taken place or not. If electricity transits through a country, the amount should be reported as both import and export.

Variation of stocks includes stock changes at the beginning and at the end of a month in enterprises engaged in the production, transformation, import and export of energy. The difference is calculated by subtracting the state of stocks at the beginning of the first working day in a month from the state of stocks at the end of the last day in the same month.
